

On-Screen Takeoff[®], Takeoff Boost[™], and Quick Bid[®]

Your complete takeoff and estimating solution to win more bids

At ConstructConnect, our goal is to provide commercial construction professionals with the data, insights, and preconstruction solutions to help drive your business forward.

On-Screen Takeoff helps estimators save time and money by creating accurate quantity measurements.

Takeoff Boost is an AI-based add-on feature for On-Screen Takeoff to detect and automate takeoff measurements on architectural floorplans, faster.

Quick Bid is a construction estimating software that compiles itemized costs, labor production, change orders, overhead/profit, and materials to precisely predict the cost of a job.

This powerful combo lets you complete your takeoffs and estimates faster by getting measurements up to 15x faster with Takeoff Boost than with On-Screen Takeoff alone. Assign your measurements from Takeoff Boost to conditions in On-Screen Takeoff that sync to Quick Bid in real time to complete your estimates.

On-Screen Takeoff's time-saving tools include:

- Multi-Condition Takeoff lets you select multiple items, draw the takeoff once, and OST places the appropriate takeoff objects on the plans all at once.
- Templates to measure repeated rooms, floors, and areas can be drawn once and applied throughout the plan set.
- Bid areas and zones to allocate takeoff quantities to floors, buildings, phases, etc.
- Create notes, project comments, markups, and linked views for better collaboration.
- Overlay updated plans over the previous version to compare and identify changes. Any changes are color-coded for easy recognition.
- Conditions and takeoff from the base bid can be reused (via copy and paste) when creating bidding alternates and change orders.
- Send plans and specifications straight from ConstructConnect Project Intelligence to On-Screen Takeoff for faster project setup.

Takeoff Boost for On-Screen Takeoff helps deliver takeoff quantities faster:

- Automatically performs takeoff measurements, and creates conditions in On-Screen Takeoff for area, linear, and object counts.
- Can take measurements in imperial and metric units on architectural floorplans in PDF.
- Process two pages simultaneously while you work on other things.
- Requires an on-maintenance On-Screen Takeoff license, the latest version of On-Screen Takeoff, and a Takeoff Boost subscription.

Quick Bid helps you quickly and accurately estimate construction projects by letting you:

- Compile material and labor pricing using assemblies containing detailed items to easily calculate job costs.
- Use eQuotes to get up-to-date material pricing from your suppliers to incorporate into your estimate.
- Review and edit overhead and profit for the entire bid or by CSI section for a more precise bid.
- Sync your takeoff quantities from On-Screen Takeoff in real time to build accurate and detailed assemblies. Assemblies can be saved for use on future projects.
- Easily create change orders and alternates without having to start from scratch. These can be built independently and included as part of the entire job cost.
- Create branded, formal proposals, including your company logo, containing information on the total and detailed costs of your bid.
- Export your bid job cost data to expedite the creation of a detailed budget to import into your accounting software.
- Access specialty material assemblies from top manufacturers in the construction industry.
